

# How to integrate a new module on Evo Wall

---

How to – ver. 1.0

This is a quick guide that explain how to add 3th party modules to the Evo Wall. Before to start

- 1) make sure the module you want add to the wall supports the spy notifications
- 2) create a full backup of your database and of the files of EvoWall

To show the procedure we want use an example that explains as to integrate a module of the seller MODZZZ. The module we'll add it's **Modzzz Pets**.

This module is already integrated on EvoWall (from the version 1.1.4), and here we'll show hot we have get this result.

## STEP 1

- 1) Open basecore.php
- 2) Copy the code part that refer to one of existent Modzzz module, for example Modzzz Clubs (if you want add a new module of Modzzz, otherwise you can use the code of basecore for the Boonex Groups posts. This is for example the code for the module Modzzz Clubs:

```
// MODZZZ CLUB
elseif (($row['lang_key']=='_modzzz_club_spy_post' OR $row['lang_key']=='_modzzz_club_spy_post_change' OR
$row['lang_key']=='_modzzz_club_spy_join' OR $row['lang_key']=='_modzzz_club_spy_rate' OR
$row['lang_key']=='_modzzz_club_spy_comment' OR $row['lang_key']=='_ibdw_evowall_bx_clubs_add_condivisione')
and ($func->ActionVerify($profilemembership,"EVO WALL - Groups")))
{//modzzz club inherits the settings of boonex groups for memberships allowed and sharing key for EVO Wall
if ($func->checkprivacyevo($row['sender_id'],$accountid,'allowview'))
