

# Adding a Photo to an HTML Block

This is a basic tutorial in response to a question on the forum. I'll expand on it later if there's any additional interest.

*It's essential to understand that the photo you plan to use is stored in your Dolphin Directory on your server. TinyMice does not allow you to use files stored elsewhere.*

I always store my images in the Images directory in my current template module. Even if you decide to use a different template, the photo will still be available provided you don't delete the template folder.

Thus, before you start, FTP your image to your **templates/tmp\_evo (or whatever)/images** directory.

Now go to **Admin/Builders/Pages Builder** and select the page where you want to place the HTML Block from the dropdown list.

I've chosen Profile.

Drag a **HTML Block** from the Inactive Items section and place it in one of the columns on your page.

I've chosen column 3 and I'm placing the block under the Description block.

Click the blue HTML Block link and this window will appear:

Change the heading and enter some text if necessary then click the photo link (in red box above).

This dialog will appear:

Insert the path to your photo and click OK.

Click OK, Then Save. You should now be able to see your image. (See next page.)

↶ ↷ Formats ▾ **B** *I* [List Icons]

[List Icons] [Link Icon] [Image Icon]

[Print Icon] [Eye Icon] [Text Color Icon] **A** ▾ [Smiley Icon]

This is my test photo.

When you go to your Profile, you should see this:

**DESCRIPTION**

My super exciting test profile that will have you laughing until you cry.

**TRAIN PHOTOS**

This is my test photo.
