Profile Visits

Here's a nice little feature you can quickly add to your Profile pages. I'm sure it's something your active members will love:

Many thanks to @netneeds on the Boonex Forum for the PHP code snippet. Although composed in 2013, it works fine on my 7.3.4 site.

Activating PHP Blocks

By default, Dolphin comes with Text and HTML Blocks, but PHP blocks must be activated.

Enter this line in your web browser:

http://www.yoursite.com/administration/pageBuil der.php?action_sys=addCodeBlock

You should receive the reply:

{"result":"ok"}

(Thanks to @Nathan Paton for the code.)

Create a PHP Block

Go to **/Admin/Builders/Pages Builder/** and select **Profile** from the Drop Down List.

When you reach the Page Builder Profile Page, look for **Samples** towards the bottom left. There you will see the following blocks:

RSS Feed HTML Block Text Block PHP Block - This is the new block you created above.

| + Ads | ++ Friends | + Joined Events | + Joined Groups |
|----------------|------------|--------------------|-----------------|
| + Photo Albums | + Pols | + Profile Comments | + Profile Photo |
| + PHP Block | + RSS Feed | ++ HTML Block | ++ Text Block |

Click and drag the PHP block to the top of the left column. (This is only a suggestion, you may prefer to place it elsewhere.)

| Active Blocks | |
|-----------------|------------------------|
| | |
| | |
| | |
| | Column 2 (28.1%/320px) |
| | + PHP Block (1) |
| | ++ Profile Photos |
| | ++ Actions |
| | Friend Request |
| | Admin Controls |
| | |
| | + Rate Profile |
| / | |
| Inactive Blocks | 3 |
| ++ Ads | +++ Friends |
| + Photo Albums | + Polls |
| Samples | |
| + PHP Block | + RSS Feed |
| | |

Click the PHP Block (1) over the blue writing to open the Block Dialog and fill out the following details:

| | BLOCK × |
|-----|---|
| | Type PHP Block |
| | Description Simple PHP Block |
| | * Caption Lang Key |
| (2) | Visitors |
| | * Design Box Layout |
| | Box (title, padding) |
| (3) | Visible For ☐ Guest ✓ Member |
| (4) | global \$site; See Next Page global \$aPreValues; For Code to global \$p_arr; For Code to \$Memb = (int)\$p_arr['ID']; Go here. |
| | \$arr = db_arr("SELECT `Views` FROM |
| (5) | SAVE DELETE |

- (2) You can use any title You like here.
- (3) Uncheck **Guests** if you don't wish guests to see this information
- (4) Cut and paste the following code: It must be accurate, so please don't alter it unless you know what you're doing:

// --- Code Begin

```
global $site;
global $aPreValues;
global $p_arr;
$Memb = (int)$p_arr['ID'];
$arr = db_arr("SELECT `Views` FROM
`Profiles` WHERE `ID` = '$Memb'");
$MemViews = $arr['Views'];
```

```
if ( $MemViews > 0 )
{echo {echo
"<br>>&nbsp;&nbsp;&nbsp;My profile
has been visited $MemViews times";}
```

// — Code End

(5) Click Save when done.

Clear the site **Cache.** It's not always necessary, but it helps avoid frustrating failures.

Now go to your profile to see the results of five minutes work. It's a great addition to your member's profiles.
